

Gtee semantic model mapping session by WGs #1 and #2, 2019-09-23, 14-16 CET

Attending:

Hugo Verschoren
Laura Ahvenainen
Mario Reichel
Olli Jääsaari
Saila Alapiha
Mirka Lindström
Seija Haavisto-Virtanen
Jari Hänninen
Harri Rantanen

Items discussed:

Ready-made texts from authorities available in some countries

- challenge to have possibly requirement on country basis all documentation to be on paper

Harri and Saila prepared an idea to have link (URL) to commonly accepted guarantee text

- the reference to be available at the semantic model
- possible copy of the text to the free text room (not needed unless the counter-parties will require it)
- and finally printed to paper if needed

Following the common model if available

URDG-rules

- may make other rules and specifications obsolete
- yet there is still need to specify possibility to agree per bank-specific rules so that the counter-parties of the guarantee understand the specific terms

Issuance semantic model (based on ISO 20022 tsrv.001 message) walk-through

- Harri will compose a suggestion of the fields filled into the semantic model based on the application part already done
- Cross-check with Saila before common review

Next meeting

- Are we OK to go into other use cases per smaller groups and map the details into the Application model?
- Harri to invite next meeting on the latter part of October
