

Gtee semantic model mapping session by WGs #1 and #2, 2019-12-16, 14-16 CET

**Attending:**

Eduard Vugmeister  
Jari Hänninen  
Hugo Verschoren  
Mario Reichel  
Harri Rantanen  
Kirsi Larkiala  
Saila Alapiha

**Items discussed:**

- previous meeting memo
  - o no comments
- any comments for the work done at the previous meeting (2019-10-25)
  - o no comments from public release and not either
  - o from the team today attending
- Walk-through of the current semantic model status
  - o Harri presented the changes made to link dynamic code list from [www.standardisedtrust.com](https://standardisedtrust.com/resources/guarantee-code-lists/) page <https://standardisedtrust.com/resources/guarantee-code-lists/>
    - application workbook is not using this dynamically and same will apply to Issuance workbook
    - this enables a basement of a common repository of commonly used codes and free text templates at the community home-page
  - o we also discussed the template, Harri had prepared for the meeting, of gtee Issuance
    - we decided to continue by simply describing only the Issuance specific new data / semantic model parts and take the already described parts from Application template as a copy only
    - this needs to ensure that changes done on the later stage semantic model life-cycles will not dynamically change the earlier stage documentation
  - o we noticed together that we have now good enough basement to start expanding the work further to three dimensions in smaller streams and task forces (see below on next steps)
  - o we also noticed that in addition to current work done and related to the life-cycles we will need more specific business rules to define what can be changed / amended in the various life-cycle stages
    - this will be done later by the team business end-to-end process experts
- next steps
  - o the work will be continued in three streams
    - map available gtee texts
      - coordinated by Hugo
      - where common texts can be found and how to fit them to existing and upcoming semantic model stages
    - broaden the use cases
      - coordinated by Laura (Harri to ensure the availability)
      - existing OneDrive samples to be mapped to the semantic model and also listing the needs of possible existing semantic model extensions
    - next steps on gtee life-cycle
      - coordinated by Harri
      - continuation of the existing model with the new stages based on the base model from ISO 20022 as well with the work done already in our team

- all streams will need working power and activities
  - please inform yourselves as a resource to respective coordinator or coordinators
- work in the streams will be started as soon as possible and consolidated in a longer common meeting mid-February
  - Seija has offered venue from Kone for this, which Harri will confirm with her
- next plenary meeting will be arranged nearby the ITFA Helsinki event on the 2020-02-27
- new members
  - Andrea Hauptmann from ICC has not yet responded
  - SWIFT's Christian Heuscchen is considering to join us
  - Kirsi offered Ms. Sirpa Kosonen's help in team coordination which was welcomed
- thanks for all in the group for the year 2019 contribution!
  - we will need the contribution even more in 2020 😊
